

Factsheet 44

NHS services

September 2020

About this factsheet

This factsheet contains information about NHS '*primary care*' services – services you approach in a non-emergency situation when you first have a health problem.

It looks at services to help you identify:

- if you need to see a GP
- services provided by a GP and services you access via your GP
- services from your local pharmacy
- how the NHS helps you manage a long-term condition that can be treated and managed but not cured
- NHS screening programmes and services for older adults.

Age UK produces other factsheets on NHS services – these include factsheet 5, *Dental care: NHS and private treatment*; factsheet 61, *Help with health costs* and factsheet 66, *Resolving problems and making a complaint about NHS care*.

The information in this factsheet is applicable in England. If you are in Scotland, Wales or Northern Ireland, please contact Age Scotland, Age Cymru or Age NI for their version of this factsheet. Contact details can be found at the back of this factsheet.

Contact details for any organisation mentioned in this factsheet can be found in the *Useful organisations* section.

1 National Health Service

The fundamental principle of the NHS is that no one should be denied or charged for necessary *emergency* treatment in an NHS hospital. You can also consult a GP without charge and apply to register with a GP, regardless of nationality and residential status. You must pay NHS prescription charges unless you are in a group exempt from these charges. See section 9 for information on exemptions.

Non-urgent NHS hospital care is only free if you are living here lawfully and are '*ordinarily resident*' in the UK. '*Ordinarily resident*' is a legal term that broadly means living here voluntarily, for a properly settled purpose for the time being. If you meet these requirements, access to hospital treatment is based on clinical need. If there are doubts about meeting ordinary resident requirements, your case must be judged on its merits.

If visiting the UK

You may have to pay if you need *non-urgent* hospital treatment as described in *The National Health Service (Charges to Overseas Visitors) Regulations 2015*, with 2017 amendments, and supporting guidance.

The rules vary depending on whether you live in a European Economic Area (EEA) country or Switzerland and your healthcare is paid for by the UK via a UK-issued S1 form registered with relevant authorities; you are a visitor from an EEA country with a valid European Health Insurance Card; or are a visitor from a non-EEA. You can read about your rights at www.nhs.uk/ by searching '*visiting or moving to England*'.

From 1 January 2021, EEA/Swiss visitors may not be covered for healthcare as they are now, and it may become chargeable.

2 NHS Constitution – your rights

NHS Constitution establishes the **principles and values** of the NHS in England. It sets out the **rights** that patients, members of the public and NHS staff are entitled to, and the **responsibilities** they owe each other to ensure the NHS operates effectively and fairly. NHS organisations, the independent and voluntary sector who provide NHS services, and local authorities with a public health duty, are required to take account of the Constitution when purchasing and delivering services.

An example of a patient right is: '*You have the right to be given information about test and treatment options available to you, what they involve and the risks and benefits.*'

An example of a patient responsibility is '*Please follow the course of treatment you have agreed and talk to your clinician if you find it difficult.*'

You can order a copy of the *NHS Constitution – the NHS belongs to us all* (ref 2900013) from DH publications or download a copy at www.gov.uk/government/publications/the-nhs-constitution-for-england.

3 **Equality Act 2010 and age discrimination**

The *Equality Act 2010* protects you from being unfairly discriminated against. It applies to anyone over the age of 18 and to all public services. It means it is unlawful for the NHS, without good and sufficient reason, to provide inferior services, or refuse to provide them solely because of one of the Act's nine '*protected characteristics*'.

Note

The *Equality Act 2010* '*protected characteristics*' are age, disability, gender reassignment, marriage and civil partnership, pregnancy and maternity, race, religion and belief, sex, and sexual orientation.

Under *the Act*, discrimination means *unfairly* treating you differently because of your age. The law only intends to prevent *harmful or unjustifiable* use of age, including a '*stereotypical view*' of a particular age group. It does not intend to prevent differential treatment where there is '*objective justification*'.

Cancer screening and flu vaccination programmes are examples of where there may be objective justification for the NHS to offer a service to a certain gender or people within certain age ranges.

Other situations where *the Act* applies to the NHS include:

- **When a GP, consultant or other health professional discusses treatment options with you or makes a 'best interests' decision about treatment or care.** Your age can play a part but staff should take account of your '*biological*' age, not simply your '*chronological*' age (your age in years).

If there are treatments for conditions such as cancer that are less successful or less well tolerated as people get older, the doctor should discuss this openly when explaining treatment options.

- **When providing NHS services or considering treatment options.** An example of '*Unjustifiable discrimination*' would be to stereotype someone of a particular chronological age.
- **When designing or providing a service (such as at a GP practice or out-patients clinic).** An example of age discrimination would be where staff treat you differently on the basis of your age, or take a stereotypical view of people of a particular age.

You can often clarify and resolve a situation by discussing it with staff concerned. The law means that if necessary, you can take NHS organisations, clinicians, or managers to court on grounds of age discrimination. Speak to the Equality Advisory Support Service helpline if you think you have been discriminated against.

For more information, see factsheet 79, *Equality, discrimination and the Public Sector Equality Duty*.

4 Accessible Information Standard

The Accessible Information Standard aims to make sure that when you have a disability or sensory loss, you receive information you can access and understand, as well as the communication support you need, when engaging with NHS or social care staff. This means staff must:

- 1 **Ask** if you have communication or information needs relating to a disability or sensory loss, and if so what they are.
- 2 **Record** your needs in your electronic and paper records.
- 3 **Alert/flag/highlight** them, so your needs and how best to meet them are '*highly visible*' whenever staff access your records.
- 4 **Share** details of your information and communication needs with providers of NHS and social care services who have permission to see them, and make sure they keep your records secure.
- 5 **Act** by taking steps to ensure you get information you can access and understand and by arranging communication support.

For NHS services, it is likely your GP will ask about and record your information and communication needs in your GP record. When referring you for an outpatient appointment or other NHS services, this information should be '*highly visible*' to the receiving department, who transfer it to your hospital record making it '*highly visible*', and act upon it.

They may send correspondence or information in large print, easy read, Braille, or audio format, or by email, or arrange for a lip reader or British Sign Language Interpreter to be available for your appointment.

For information, contact your GP practice, Action on Hearing Loss, or The Royal National Institute of Blind People.

5 Local NHS services

5.1 Primary and secondary care services

Primary care services are often your first point of contact when you need healthcare. They include services available at a GP practice or walk-in centre, community pharmacy, and NHS services provided by dentists or high street opticians.

Secondary care services are usually, but not always, hospital-based. They include out-patient clinics, planned and emergency hospital treatment and associated diagnostic services, for example radiology.

Commissioning NHS services

NHS England and Clinical Commissioning Groups (CCGs) are responsible for buying (commissioning) NHS services from GPs, dentists, and hospitals. For more information, see section 15.

6 Non GP services to help if you are unwell

6.1 Getting help when feeling unwell

It is not always necessary to contact your GP practice when you feel unwell. Other services can help you decide whether you need to see a doctor or to put your mind at rest. These include:

- your local pharmacist
- NHS 111
- NHS walk-in centre
- minor injuries unit or urgent care centre.

Local pharmacist

A pharmacist can help with sore throats, colds, and other aches and pains by suggesting non-prescription medicines to ease symptoms and advise whether you need to see a doctor. As experts on medicines, they can answer questions about non-prescription remedies you want to buy or prescription items you take.

To find out about your nearest late-opening pharmacy, call NHS 111 or visit NHS website: www.nhs.uk/service-search.

NHS 111

NHS 111 is a confidential, free 24-hour telephone line operating in England. It provides a single point of access if you are worried about an urgent medical concern, a dental problem, are seeking advice in a non-life-threatening situation, or have run out of prescribed medicine.

Ask for a translator if you need one. Go to 111.nhs.uk/ for online service.

Depending on your symptoms, NHS 111 staff may tell you how to look after yourself at home or recommend another service to help you such as a community pharmacy.

They may decide to connect you to a nurse or health professional for further advice. Where necessary, staff can book a GP appointment or in some areas, book an appointment with other local NHS services.

If the problem is more serious, they may advise you go to your nearest minor injuries unit, urgent care centre, or emergency department. If very serious, staff can send an ambulance directly.

Note

999 is always the number to call in serious, life-threatening situations.

Urgent treatment centres (walk-in centre or minor injury unit)

The NHS offers a mix of services able to help in urgent but not life-threatening situations. Each offers a different level of service. By Autumn 2020, the intention is to call them all '*urgent treatment centres*'.

NHS walk-in centre

These centres open seven days a week from early morning until late evening. Often in town centres and usually run by experienced nurses, they treat minor illnesses and injuries. You do not need an appointment.

Minor injuries units and urgent treatment centres

These are for patients with non-life-threatening injuries. Often located in hospital grounds, they treat broken bones, minor burns, head and eye injuries, insect and animal bites.

Emergency and out of hours dental services

Call NHS 111 to find out where to access NHS treatment in an emergency or out-of-hours. If you have a usual dentist, the practice website or out-of-hours message often explains how to access emergency care.

6.2 Serious or life-threatening illness or injury

If your illness or injury is serious or life-threatening, call 999 or go to your nearest Emergency department. Life-threatening situations include:

- loss of consciousness
- persistent severe chest pain
- heavy blood loss that cannot be stopped
- medicine overdose
- signs indicating a stroke. These include weakness on one side of your face making your eye or mouth droop; inability to lift both arms at the same time; difficulties in speaking or understanding what is said.

Waiting time targets

The aim is for 95 per cent of patients attending the Emergency department to be admitted, transferred, or discharged within four hours of arriving. NHS England publishes waiting time figures and they take account of waits at Emergency departments and minor injury units. Hospitals are encouraged to publish their own figures.

If you attend an Emergency department or spend a night on a ward, the hospital should ask you the Friends and Family Test question, described in section 7.4.

7 GP services

GP practices in England must register with the Care Quality Commission (CQC) and be inspected by them, to ensure they meet its standards. To find out how the CQC regulates and rates practices, visit their website or read their booklet '*What can you expect from a good GP practice*'.

To help practices to provide a wider range of services and better access for patients, each practice is a member of a local Primary Care Network.

A range of services and health professionals

GP practices offer services to prevent and treat illnesses and support people with long-term conditions such as diabetes, heart disease, asthma, and chronic obstructive pulmonary disease (COPD).

Nurse practitioners, nurse consultants and specialist nurses frequently work alongside GPs and practice nurses. They can diagnose, treat and manage a variety of health conditions. Some staff, due to their additional training, can prescribe from a list of medicines. See section 7.10 for information about supporting people with long-term conditions.

7.1 Registering with a GP practice

You do not need to be '*ordinarily resident*' in England to receive NHS primary *medical* care. Anyone may register with a practice and consult with a GP without charge but must pay NHS prescription charges, unless in an exempt group, for example, being aged 60 and over.

Each practice has a boundary, enclosing certain streets or postcodes. Practices are free to register new patients who live outside their boundary, but it is for a practice to decide if it is clinically appropriate and practical to register you in this way. Conditions for registering a patient living outside a practice area are explained later in this section.

You have a right to choose your practice and staff will give you GMS1 registration form to complete. The practice must accept you unless there are reasonable grounds to refuse. It is not considered reasonable to refuse registration because you do not have a proof of address or personal identification at hand. The same applies if you are an asylum seeker, refugee, a homeless patient, or an overseas visitor, whether lawfully in the UK or not. Go to [nhs.uk](https://www.nhs.uk) for more information.

If the practice is refusing to register you, it must give reasons for its refusal in writing. It may refuse to register you because:

- it has no capacity to take on new patients
- may not be accepting patients who live outside its practice boundary
- in your particular circumstances, it may not be appropriate to register with a practice a long way from where you live.

For details of local practices, visit NHS website. If you cannot find a practice to accept you, contact NHS England Customer Contact Centre.

Choosing a practice

If a practice is accepting new patients, collect a practice leaflet or look on their website. This explains how to register and more about the staff and services they offer, including:

- name and qualifications of health professionals and support staff
- holding special clinics for example for diabetics
- opening hours
- how to make an appointment to see or speak to staff or for a home visit
- how to request a repeat prescription
- how to contact a doctor out-of-hours
- information for patients with disabilities or special language needs
- how to comment or complain about services.

Identify and ask about things important to you, for example ease of parking or support for carers.

Practices have a responsibility to ensure everyone who needs to use their practice can do so. If you have difficulties getting to the practice, due to a disability or caring responsibilities, discuss them with the practice manager so they can do their best to address or resolve them. If you are a carer, ask the practice to note this in your records. This can help your GP understand your needs better and support you and the person you care for.

The GP contract requires every patient to have a named, accountable GP who takes responsibility for co-ordinating their care. You can express a preference for who you would like this to be and practices should make reasonable efforts to accommodate you. This does not mean this is the GP you must see each time you visit. New patients should know the name of their accountable GP within 21 days of registration.

The practice should invite you for a new patient check to discuss your general health, and where necessary, offer this through a home visit.

Registering with a practice if you live in a care home

Your GP may be willing to continue to care for you if you move permanently into a local care home. Otherwise you must register with a new practice. Care homes in some areas have a nominated GP from a local practice who is responsible for all residents. The aim is for you and the care home to build a relationship with the GP practice. You have the right to request to register with a different practice.

Care home residents are entitled to the same range of services as people living in their own home and should not be asked to pay for NHS services the GP says they need. *Enhanced health in care homes* is a new NHS initiative to take a more pro-active approach to providing support for residents and staff.

‘Out of area’ patient registration option

GP practices are free to register patients who live outside their practice boundary. They can agree to accept your application but without any obligation to offer home visits. You may want to consider this option if you are in relatively good health and move just outside your current practice boundary or would like a practice close to your place of work.

Before agreeing to your request, the GP must:

- be satisfied it is clinically appropriate and practical in your case, and
- make sure you understand the consequences of this type of registration.

The practice should explain what happens during normal hours when illness means you cannot reasonably be expected to visit the surgery.

Your practice must monitor the effectiveness of this arrangement and if your health needs change, may consider whether it would be better to register with a practice closer to home.

Practices do not have to offer out of area registration - either without home visits or with home visits when needed - so an application may be refused. It applies only to GP practices based in, and patients living in England, not in cross border situations with Scotland or Wales.

Registering as a temporary resident

If you are going to live away from your usual address for up to three months, you can apply to be a temporary resident at a local practice. They are likely to accept you unless their list is full.

If you become ill while staying with friends, approach their practice to see if they are willing to treat you. If staying in a hotel, it may have an arrangement with a local practice. Otherwise, call NHS 111 and they can recommend the most appropriate action to take.

Changing your practice

You do not need to tell your practice if you want to change or have found another one to accept you. You may wish to tell them as a courtesy. Once a new practice accepts you, your old practice transfers your medical records. These include your **unique 10-digit NHS number**, which eliminates errors that could occur with name only identification.

7.2 Arranging to see a GP

Extended hours and out-of-hours services

Practices may offer appointments before 8am, after 6pm, and at weekends. In many areas, patients registered with several local practices can see a GP at a local hub. When calling your practice outside its normal hours, you are usually redirected to their out-of-hours service. For non-urgent care, use NHS 111 online tool or call for advice.

Making an appointment

GPs have a duty of care to ensure they offer services in a manner and time that meets your clinical needs. Practices have a system for booking appointments, allowing you to see a GP in an emergency or when there are no free appointments, and to speak to a GP or nurse on the telephone at an agreed time, with some offering video consultations.

Healthwatch 'top tips' for patients, health and care professionals can help prepare for a video consultation. Go to www.healthwatch.co.uk/advice-and-information/2020-07-28/getting-most-out-virtual-health-and-care-experience.

You can book an appointment by telephone and online. Ask your practice receptionist to explain how to register for online services and about apps you can download to your smartphone or tablet, such as **NHS App** or **myGP App**. Online tools let you:

- book appointments with a GP of your choice or cancel appointments
- order repeat prescriptions (see section 10)
- view your GP record (clinical information)
- link to register as an organ donor (NHS App).

For general information, go to NHS website www.nhs.uk/using-the-nhs/nhs-services/gps/gp-online-services/.

Making the most of your appointment

A typical appointment slot is 10 minutes. If you have complex or multiple issues to discuss, ask for a double appointment.

Make notes to remind you what you want to tell or ask the doctor about. Do not miss things out because you think they are trivial. GPs can only work with what you tell them, so let them decide what is significant.

- If worried about new symptoms, try to remember when you first noticed them. Does there seem to be a pattern or certain times when they are better or worse? Could they be linked to changes in medication?
- If you do not understand the answer to your questions or any words used, ask for an explanation or for the answer to be written down.
- If going for test results and to discuss treatment, your doctor should tell you if there is more than one treatment, about the pros and cons of each and whether there are common side effects.

Seeking a second opinion

If you have doubts about a diagnosis or treatment after discussing it with your GP, you can ask to be referred for a second opinion. You do not have a right to a second opinion, but GPs rarely refuse, unless they believe it is unnecessary. This may be to another GP in your practice or a consultant.

Home visits

The practice leaflet or website explains criteria for home visits. While having a general policy, staff should make decisions on a case-by-case basis, based on clinical need. Giving a full description of your condition when you phone, helps the doctor decide if you need a home visit.

7.3 Removing a patient from the practice list

A practice can make a written request to NHS England for you to be removed from their list. This happens if you tell them you are moving outside the practice boundary or relocating abroad. It can happen if the practice believes your behaviour towards staff or other patients is unacceptable or your relationship with it has irrevocably broken down.

If the practice intends to request to remove you from their list, it must have given you a written warning in the previous twelve months prior to requesting your removal. This does not apply if you were violent, threatened staff or other patients, and the police were informed; or if the practice believed issuing a warning was not reasonable or practical.

The practice should provide you with specific reasons for wanting your removal, unless it reasonably believes the circumstance surrounding the request mean it is not appropriate to give a specific reason, and there has been an irrevocable breakdown in your relationship with the practice. If it is difficult to register with a new practice, contact NHS England for details of your Area Team. They can allocate you to a new practice.

If you disagree with the reasons for your removal and believe you have been treated unfairly, complain to NHS England Customer Contact Team. See section 14 for information about making a complaint.

7.4 Helping to improve GP services

Patient Participation Groups

GP practices must have a Patient Participation Group (PPG) and make reasonable efforts to make sure it is representative of the practice population. PPGs bring the patients' perspective into the practice so that services, plans and activities respond to patients' needs and priorities.

Providing feedback

GP practices should offer you the opportunity, after an appointment, to respond to the Friends and Family Test question: *"how likely are you to recommend the practice where you've been treated to your friends or family if they needed similar treatment?"* You can also provide feedback on NHS website and Care Opinion.

For more information, see www.nhs.uk/using-the-nhs/about-the-nhs/friends-and-family-test-fft/.

7.5 Help with hearing difficulties

If hearing difficulties affect your daily life, make an appointment to see your GP. If there is no medical reason, such as an ear infection or build-up of wax, your GP can refer you to a local audiology department or specialist provider for a hearing test.

Audiology staff discuss the results with you and your options, including whether you would benefit from a hearing aid in one or both ears. NHS hearing aids are provided on long term loan and new batteries are free. If you want to buy a hearing aid privately, check the hearing aid dispenser is registered with the Health and Care Professions Council.

NICE produce a patient version of its guidance *NG98 Hearing loss in adults: assessment and management*, go to www.nice.org.uk/guidance/ng98/informationforpublic.

Action on Hearing Loss provides information about hearing loss and aids. Hearing Link helps people manage hearing loss.

Note

Action on Hearing Loss offer a telephone hearing check if you call 0844 800 3838. Calls cost 7p per minute plus your phone company's access charge. It is not a medical diagnosis but aims to identify hearing loss and if necessary, recommend next steps such as speaking to your GP.

7.6 Help with mental health needs

Mental health issues are as important as physical illnesses and like physical illnesses, respond better when diagnosed and treated early.

It is important to speak to your GP if you experience periods of anxiety, low mood, poor sleep, or a loss of interest in things you used to enjoy on most days of the week, and this goes on for two weeks or more. A range of treatments can help, depending on the severity of your symptoms.

Talking treatments, such as counselling, help you understand and manage your feelings and behaviour. They can really help if you are feeling low, anxious or out of sorts. They are proven to work and research shows they can work particularly well for older people.

Help is available through an NHS initiative called '*Increasing Access to Psychological Therapy*' (IAPT).

Find out more by speaking to your GP or visiting NHS website at www.nhs.uk/service-search/find-a-psychological-therapies-service/.

In many areas, you can self-refer to your local service, and they only contact your GP with your permission.

7.7 Referral for a physical or mental health condition

If your GP agrees you should see a consultant about a physical condition, you have a right to choose a consultant-led team. For a mental health condition, you have a right to choose the consultant or named health care professional who leads the mental health team.

You can choose to have your first outpatient appointment at a hospital where that consultant works and be treated by their team. The hospital must be in England and can be an NHS hospital, or independent hospital offering suitable treatment that provides this service to the NHS.

The consultant will not necessarily be present for this or future appointments but retains overall clinical responsibility for your care.

This choice is available in most circumstances but not if you need urgent or emergency care, for example if you have chest pains or cancer is suspected, or you are detained under the *Mental Health Act 1983*.

If you are not offered a choice, despite further discussion with your GP, contact your local CCG to find out what choice should be available to you. Search for your CCG on the NHS website.

Choosing your hospital – practical and quality issues

You can discuss your preferences and options with your GP, compare hospitals on the NHS website, or read hospital inspection reports published on the CQC website. As well as clinical care, you may be influenced by issues, such as the likely wait for your first appointment, car parking or public transport access.

Booking an appointment through NHS e-referral Service

The NHS e-referral service allows you to choose your hospital and book an appointment on a day and time convenient to you. If you choose your hospital and know when you could attend an outpatient appointment, you may be able to book the appointment before you leave the surgery.

If you want to think about your options, discuss them with family or friends, or decide a convenient time to attend outpatients, your GP can give you an appointment request letter containing a *unique reference number and a password*, so you can book an appointment later on.

To book an appointment later on:

- log into NHS e-referral online at www.nhs.uk/using-the-nhs/nhs-services/hospitals/nhs-e-referral-service/ or
- call Appointment Line on 0345 608 8888 or textphone 0345 850 2250.

You need the unique reference number and password for security. It ensures only you or someone you nominate can make or change your appointment. You can change an appointment online or by telephone.

Waiting times

You have a right to access certain services within national maximum waiting times. You have the right under the NHS Constitution to:

- start your NHS consultant-led treatment within a maximum of 18 weeks from referral for non-urgent conditions
- be seen by a cancer specialist within a maximum of two weeks from referral if a GP makes an urgent referral because cancer is suspected.

If this is not possible, the hospital responsible for your treatment should take all reasonable steps to offer you a choice of other hospitals that can see or treat you more quickly.

Although not a right, if your operation or treatment is cancelled for non-clinical reasons, on or after the day of admission (including the day of surgery), the NHS should aim to offer you another binding date within 28 days, to be funded at the time and hospital of your choice.

7.8 Chiropody, physiotherapy and other services

Your GP can refer you to other health professionals for a diagnosis or treatment. You can see them at a local practice, health centre or hospital or they may visit you at home.

Chiropodists (also known as podiatrists) help with problems with your lower legs or feet. In some places, you can self-refer to the chiropody service but in many cases, you need a GP referral. To receive NHS treatment, you must meet local eligibility criteria. This can mean having a medical foot problem or being at risk of foot-related problems because you have diabetes, arthritis or circulatory problems.

The NHS is unlikely to offer routine care such as nail cutting but local voluntary organisations such as Age UK may do.

Continence services. See a GP if you have bladder or bowel problems. They may decide to refer you to a district nurse or continence clinic for an assessment and to discuss treatment, or ways to manage a problem. They may decide you need pads or other products for long term management and where appropriate, include this in your care plan.

Each CCG has its own criteria for deciding when continence products are necessary, which products it prescribes, and it may limit the number of pads per day. If these do not meet your needs, speak to the health professional treating you and explain why. If unhappy with the outcome, you can complain. For more information, see Age UK Guide IG15, *Bladder and bowel problems*. Continence Product Advisor gives evidence-based advice on how to choose and use suitable products.

Dietitians are experts in nutrition and special diets and work with Speech and Language Therapists to help patients with swallowing difficulties. They can advise on meals or supplements for people with poor or small appetites.

Macmillan Nurses help patients with cancer and their families through diagnosis and treatment. They also advise on aspects of care when treatment is for comfort and not cure, known as palliative care.

Marie Curie nurses offer free nursing care to support people with a terminal illness who wish to die at home, and their family and friends. They can provide one-to-one nursing care and support overnight in your home. Speak to your GP or district nurse to see if they work in your area.

Occupational therapists (OTs) advise on home modifications or equipment to make living at home easier. Your GP or social services can refer you to an OT. They can be members of a multi-disciplinary team offering rehabilitation support.

Physiotherapists help with back pain and muscle strains. They may be members of a multi-disciplinary team offering rehabilitation following a fall, or stroke, or for conditions such as osteoporosis and asthma.

Speech and language therapists help with speech and communication. They can help with eating and swallowing difficulties that can occur following a stroke or in people with dementia.

Note

If you approach health professionals to treat you privately, contact the Health and Care Professions Council (HCPC) to check they are registered to practice. The HCPC registers 15 health professions.

7.9 Falls Prevention Services

If you have a fall or start to feel unsteady, discuss this with your GP, even if you generally feel fine and were not injured by the fall. Your GP may want to check your medication or arrange tests to see if there is a medical reason to explain why you fell.

With your permission, your GP can refer you to the local falls prevention service for a falls risk assessment. This service aims to:

- try to work out what is making you unsteady
- listen to what you think the problem might be
- work with you to develop a plan to help reduce your risk of falling.

This can include checking your eyesight, investigating any continence problems, checking your home for potential hazards, or attending an exercise class to improve your strength and balance.

As well as considering your risk of further falls, your GP may review your risk of osteoporosis. This condition affects bone strength and means you can break a bone following even a minor fall. If you are at significant risk, your GP should discuss options to reduce your risk. The Royal Osteoporosis Society has information about osteoporosis.

7.10 Supporting people with long-term conditions

Millions of people have one or more '*long-term*' conditions (LTCs) such as diabetes, arthritis, heart disease, chronic obstructive pulmonary disease (COPD), or other lung diseases. LTCs can be managed with medication and other treatments but cannot be cured.

Staff involved in your care should be keen to help you better understand and manage your health. This may include asking about your health priorities and goals, then drawing up a care plan to help you manage your condition(s) on a day-to-day basis. Ask them about national support organisations and how to contact local support groups, where you can share experiences with people living with the same condition(s).

Many patients benefit from self-management courses. Ask your GP or support group if there are local courses you could attend.

NICE Quality Standards

NICE Quality Standards aim to help with the planning and delivery of quality of care. They indicate what achievable markers of quality care look like. There are Standards for chronic heart failure, COPD, dementia, type 2 diabetes, depression, and stroke.

NICE also has Standards for NHS services, social care, and public health. There are Standards to help people live well with dementia and to support the mental wellbeing of older people in care homes. You can refer to them when discussing your care. The NICE website has more information.

7.11 Support to maintain independence

Having one or more '*long term*' conditions can have an impact on your independence and wellbeing. It is important to tell your GP if you notice small, gradual changes in your ability to manage everyday things such as getting in and out of the bath; notice unintentional loss of weight; are suffering minor health setbacks or have found it difficult to bounce back after an illness. This is sometimes described as '*showing signs of frailty*'.

When staff know about such things, they can work with you, to keep you as well and independent as possible. They may invite you to discuss any worries about your health or ability to manage and find out what is important to you.

This might involve looking at your medication, or if you have become unsteady on your feet or had a fall, looking for possible reasons why. They may identify signs and symptoms for you to watch out for and explain what to do if you notice them. If you care for a partner, it can be helpful to look at what this role entails and identify local support to help you both.

Staff may discuss adding information to your Summary Care Record, which is described in section 13.

7.12 Personal health budgets

A Personal Health Budget (PHB) aims to give you more choice, flexibility, and control over how money is spent meeting your long-term health and wellbeing needs. It is not new money, but money the NHS would have spent on your care. If you have a PHB, you and your NHS team must agree on how you spend it.

You have the right to have a PHB if eligible for a personal wheelchair budget, or for section 117 aftercare if detained due to being detained under certain sections of *Mental Health Act 2005*. You have a right to PHB if eligible for NHS Continuing Healthcare (NHS CHC), unless there are clear clinical or financial reasons why it would not be appropriate. It cannot be used simply for paying care home fees.

If you do not have the right to PHB but interested in having one, discuss it with a health professional who manages your care. If appropriate, they can help you make a case for having one, and then approach your CCG.

If you choose to have one, you can manage a PHB in one of three ways:

- a) **notional budget** where money is held on your behalf by the NHS who then arrange your care, or
- b) **real budget held by a third-party organisation** that arranges your care, or
- c) **direct payment** giving you control to manage the budget and care agreed with your NHS team.

For more information, go to www.nhs.uk/using-the-nhs/help-with-health-costs/what-is-a-personal-health-budget/.

8 NHS services for older people

8.1 Over-60s – free prescriptions

NHS prescriptions are free for people aged 60 and over.

8.2 Over-60s – free NHS sight tests

Anyone aged 60 and over is entitled to a free NHS sight test. This checks your vision and eye health. It can pick up conditions, such as glaucoma, in the early stages before long-term damage is done.

Adults should have a test every two years. If aged 70 and over, you should have one as often as your optician recommends. They can use their professional judgement to decide the frequency of your sight test.

If you find it difficult to visit an optician, your usual optician may be able to visit you at home. If they cannot, call your CCG or local Healthwatch for information about opticians offering home visits. Many care homes arrange for an optician to visit on a regular basis.

8.3 Over-65s – free seasonal flu jab

A dose of flu can lead to complications such as pneumonia or severe bronchitis in some people. As the flu virus is always changing, there is a new vaccine every year that targets viruses likely to be in circulation. This is why you need a flu jab every year. GP practices usually start their flu jab service in September or early autumn. Community pharmacists offer free flu jabs in some areas.

The NHS traditionally offers a flu jab to adults aged 65 and over, if you receive Carer's Allowance, or are the main carer of an older or disabled person who would be at risk if you were ill, and to under 65s at risk of complications if they have flu. This last group includes people who have:

- specific long-term conditions, including chronic lung disease, a heart problem, diabetes, liver or kidney disease, or multiple sclerosis
- had a stroke or a mini stroke – the latter is known as a 'transient ischaemic attack', commonly referred to as a TIA
- a lowered immune system because of taking steroid medication or having cancer treatment.

For the 2020/21 flu season, anyone in the Covid-19 '*shielded*' group, and not already in one of the above groups, is eligible for a free jab. The intention is to offer a free jab to people aged 50–64, once the above groups, most '*at risk*' of flu-related complications, have been vaccinated.

8.4 Over-65s – free jab against pneumonia

You are eligible for this jab if aged 65 and over. It protects against pneumonia, septicaemia and bacterial meningitis and is commonly called the '*pneumo*' or PPV23 jab. You do not need a jab every year, and most people have it only once. It is available through your GP practice.

8.5 Shingles vaccination

Being vaccinated against shingles can *reduce your risk* of having shingles. If you subsequently have shingles, symptoms are likely to be milder and last for a shorter time. You only need to be vaccinated once and can have the vaccination at any time of the year.

You are eligible for vaccination if you are now aged 70, or on reaching age 78, or if you are in your 70s and born after 1 September 1942 but did not have it when first eligible, as part of the phased programme for those aged 70–79, introduced in 2013. You remain eligible until your 80th birthday. Eligibility ceases once you reach 80, because the vaccine seems to be less effective beyond this age.

Your GP decides whether you have the vaccination, as some people are not suitable, for example if your immune system is weakened after cancer treatment.

Go to [nhs.uk](https://www.nhs.uk) for more information. Your GP practice may have a leaflet.

8.6 NHS screening programmes

You must be registered with a GP practice to be included in a screening programme, as they use GP patient lists to issue invitations. It is your choice whether to take part in screening, so the NHS produces information to help you decide, and sends it with your invitation.

Screening is a way of identifying apparently healthy people who may be at an increased risk of having that particular condition. The aim is to offer it to people most likely to benefit, and to detect it early, when treatment has a better chance of working. Even if you decide to go for screening, you should remain vigilant between screenings and report any relevant symptoms or concerns to your GP.

The **NHS breast screening programme** invites women aged between 50 and 70 for screening every three years. A research programme is looking at whether to extend the age range to between 47 and 73.

You should receive a leaflet with your invitation, explaining breast screening and the possible benefits and risks. You can read the leaflet on NHS website www.nhs.uk/conditions/breast-cancer-screening/ and it includes a link to the leaflet in other languages.

You stop receiving screening invitations over the age of 70, but are still eligible for screening every three years. Contact your local breast screening clinic to request screening. Go to www.nhs.uk/ and search for '*breast screening services*'.

The **NHS cervical screening programme** invites women between the ages of 50 and 64 for screening at their GP practice every five years. Once you reach the age of 65, you are only invited if you have not been screened since the age of 50 or had a recent abnormal result. NHS website has information www.nhs.uk/conditions/cervical-screening/

The **NHS national bowel screening programme** invites you to take part by letter. If you agree, there are two types of screening.

- '*Bowel scope screening*'. This is a one-off test gradually being offered to men and women around their 55th birthday. A doctor or nurse uses a thin, flexible instrument to look inside the lower part of the bowel and remove any small growths, called polyps, which could turn into cancer. If you decide not to have it straight away, you can ask for it any time up to the age of 60, by calling the Bowel Screening helpline.
- '*Faecal immunochemical test*' (FIT). You receive a home testing kit every two years by post, between the ages of 60 and 74. There are instructions for use and you post it to a laboratory for analysis. If over the age of 75, you can request a screening kit every two years by calling the Bowel Screening helpline. The FIT kit replaces the '*faecal occult blood*' (FOB) test kit. It is more specific and easier to use, as it requires only one sample, rather than six required by the FOB test.

NHS website has information about bowel screening www.nhs.uk/conditions/bowel-cancer-screening/.

NHS Abdominal Aortic Aneurysm (AAA) screening is offered to men in their 65th year. This uses an ultrasound scanner (as used to monitor a developing baby during pregnancy). It can detect a symptom-free abnormality that can develop in the aorta – a major artery.

AAA screening is offered only to men because aneurysms are more common in men. A large aneurysm can be serious but if detected at an early stage, it can be monitored and treated if necessary.

For more information, see the NHS website www.nhs.uk/Conditions/abdominal-aortic-aneurysm-screening/

Screening to detect **diabetic retinopathy** - an eye condition - should be offered annually to anyone aged 12 and over who has diabetes. You can opt out but speak to your GP if you are not invited. For information, see the NHS website www.nhs.uk/conditions/diabetic-eye-screening/

There are no plans to screen men to detect risk of **prostate cancer** because it has not been proven that the benefits of testing outweigh the risks. Speak to your GP if you want to know more or to understand the benefits and risks of having a blood test that could lead to a prostate cancer diagnosis.

NHS service to keep you well

NHS health check is a service that aims to assess your health and if necessary, help you lower your risk of common but preventable diseases such as heart disease, type 2 diabetes, stroke, and kidney disease.

They offer it every five years to people between the ages of 40 and 74, who have not already been diagnosed with one of these conditions. If you meet these criteria, you can expect a letter from your GP or local authority inviting you for a check. If you have the check when over 65, they will tell you of signs and symptoms of dementia to watch out for.

For more information, see the NHS website: www.nhs.uk/conditions/nhs-health-check/what-is-an-nhs-health-check-new/.

9 Help with health costs

Most NHS services are free but some groups of the population, including people aged 60 and over, must pay for NHS dental treatment, and for glasses or contact lenses. If you are on a low income, you may be eligible for help with these costs.

If you receive Pension Credit Guarantee Credit, Income Support, or Income-related Employment and Support Allowance, you are automatically entitled to help with the cost of dental treatment and glasses.

If you are on a low income and have savings of less than £16,000 (£23,250 if you live in a care home) you may be entitled to full or partial help with these costs through the NHS Low Income Scheme.

If you receive Universal Credit and meet the criteria, you may be eligible for help with NHS costs. Go to the NHS website for information www.nhs.uk/using-the-nhs/help-with-health-costs/help-with-health-costs-for-people-getting-universal-credit/.

If you receive Pension Credit Guarantee Credit, one of the other benefits above, or are eligible for help through the NHS Low Income Scheme, you may be eligible for help with the cost of travel when referred to see a consultant on NHS premises. In some circumstances, referrals by a GP or dentist mean you are entitled to help with travel costs. Ask the referring doctor or dentist whether their referral qualifies for help.

For more information, see factsheet 61, *Help with health costs* or the NHS website: www.nhs.uk/using-the-nhs/help-with-health-costs/.

10 Services at your local pharmacy

Pharmacists are experts on medicines and help if you have questions about, or difficulty taking, prescribed or over-the-counter medicines. They can also advise on using an inhaler and treating minor illnesses such as coughs, colds, stomach upsets, and aches and pains.

Speak to your community pharmacist if you find medicine labels difficult to read, the usual packaging hard to open, or tablets difficult to swallow. If you take many tablets on several occasions at different times of the day, let your pharmacist know if you find it difficult to take them as prescribed. Your pharmacist may offer a simple solution or be able to decide if you are eligible for special help due to disability.

Other pharmacy services include cholesterol testing, blood pressure checks, and stop smoking advice.

Electronic Prescription Service (EPS)

Most prescriptions are now signed, sent, and processed electronically. Electronic prescribing aims to improve efficiency and safety when dispensing medicines. You nominate a pharmacy to dispense your repeat prescriptions on a regular basis. When you contact your practice to order a repeat prescription, it can securely send it to that pharmacy, via the practice IT system. This eliminates paper prescriptions and errors due to handwriting.

If your prescription is unlikely to change, the GP can agree to set up automatic delivery of your prescription for a specified number of repeats. You can amend your nominated pharmacy or amend it temporarily if you are going away and likely to need a prescription during that time.

For more information speak to your practice or go to www.nhs.uk/using-the-nhs/nhs-services/pharmacies/electronic-prescription-service/.

Many pharmacies offer a **home delivery service**. This is a helpful service but can limit the opportunity to ask questions about your medicines. Most pharmacists are happy to speak to you on the phone, so always call the pharmacy if you have questions about your medicines.

‘New medicines’ service

The New Medicines Service aims to support you in the early days of taking a new medicine, so you get maximum benefit from it. If prescribed new medicine for asthma, type 2 diabetes, chronic obstructive pulmonary disorder (COPD), high blood pressure, or any blood thinning medicines, ask your pharmacy if you can take part.

For more about this service, see the NHS website: www.nhs.uk/using-the-nhs/nhs-services/pharmacies/new-medicine-service-nms/.

Medicine Use Review (MUR)

Your GP should regularly review your medication to make sure you take the most appropriate medicines at the most appropriate dose. If your practice employs a clinical pharmacist, they may take on this role.

In addition, your community pharmacist may invite you for a MUR if you:

- were recently discharged from hospital and they made changes to the medicines you take
- take multiple medications or take one where the dose is critical
- take medicines to help your breathing
- have cardiovascular disease or cardiovascular risk factors and take four or more regular medicines.

A MUR helps make sure you get the most benefit from your medicines. It offers a chance to learn more about how they work and discuss side-effects you think they are causing, raise any problems taking your medicines, and get advice on how to take them in the best way.

If you take non-prescription medicines, bring them with you so the pharmacist gets a complete picture of the medicines you take.

The pharmacist asks you to sign a consent form to have a MUR and to sharing feedback with relevant health professionals, such as your GP.

10.1 Reporting unwanted side effects from medication

The Yellow Card Scheme allows health professionals and patients to report unwanted side effects from prescription or non-prescription medicines or herbal remedies; defective medicines of an unacceptable quality; counterfeit medicines; problems with devices such as catheters or ear thermometers; side effects or safety concerns for an e-cigarette.

A yellow card form is available in most pharmacies or you can complete an online form or call the yellow card hotline. For information go to <https://yellowcard.mhra.gov.uk/>.

11 End of life care

Palliative care is care and support provided for people living with a '*terminal illness*', defined as one where cure is no longer possible and it is likely to lead to a person's death. It aims to address your physical, emotional and spiritual needs, make life more comfortable and support your family before and after your death. It can help at any stage, not simply during the final weeks of an illness. Though no longer only available to people with cancer, they are the most likely recipients.

Developed by the hospice movement, palliative care skills are increasingly available outside a hospice environment for example in hospital or as part of care in your own home. Marie Curie Care has information to help people affected by a terminal illness, see www.mariecurie.org.uk/help/support/terminal-illness.

End of Life care refers to NHS-provided care and support if you are likely to be in the last year of life and offers support to your family or informal carers too. The focus should be on the quality of your life and death, rather than the length of your life.

Choice about end of life care

Many people die in hospital, yet most people say they would prefer to be cared for at home. If you are about to make such a decision, talk it over with your GP and seek thoughts of people you live with. Find out what you can expect as your illness progresses, what support is available from NHS staff to help you and informal carers during the day and at night. If you live alone, ask what 24-hour support would be available.

If diagnosed with an advanced, progressive, incurable illness, the NHS team caring for you should offer, or you can ask for, the opportunity to discuss your future care. This is often referred to as '**advance care planning**'. You can ask your family or nominate someone else to participate too, and at one or over several meetings may wish to:

- discuss treatment options and likely progression of your illness
- express your thoughts, concerns, wishes and preferences, including where you would like to be cared for
- ask about support available locally for you and family members.

Staff should record your wishes and preferences in an '*advance care plan*' or '*preferred priorities for care*' document and review it with you regularly. They must seek your consent to share it with professionals involved in your care. It is a '*live*' document, so you can amend and add to at any time.

You may consider making a Lasting Power of Attorney, advance statement, or advance decision to refuse treatment. See factsheet 22, *Arranging for someone to make decisions on your behalf* and factsheet 72, *Advance decisions, advance statements and living wills*.

Electronic Palliative Care Co-ordination System

In some areas, there is an Electronic Palliative Care Co-ordination System. It holds care plans and end of life preferences of people with incurable or life-limiting illnesses. Out-of-hours doctors and paramedics can access it with your consent, so they can consider and meet your end of life choices and preferences where possible. Ask your GP if this is available or planned for your area.

One Chance to get it right: improving peoples experience of care in the last few days and hours of life identifies five priorities for care of the dying patient that staff should follow when it is thought someone may die within the next few days or hours.

It recommends staff should ensure:

- 1 If a patient may die in the next few days or hours, this is recognised and communicated clearly, decisions made and actions taken in accordance with the person's needs and wishes, and these are regularly reviewed and decisions revised accordingly.
- 2 Sensitive communication takes place between staff and the dying person, and those identified as important to them.
- 3 They involve the dying person and those identified as important to them in decisions about treatment and care to the extent they would like.
- 4 They explore and respect the needs of families and those identified as important to the dying person and meet them as far as possible.
- 5 An individual plan of care, including food and drink, symptom control and psychological, social and spiritual support, is agreed, co-ordinated and delivered with compassion.

Useful publications and websites on end of life care

- ***'Planning for your future care'*** explains the rationale behind advance care planning. You can download this in several languages from NHS England website: www.england.nhs.uk/improvement-hub/publication/planning-for-your-future-care/
- ***Ambitions for palliative and end of life care – a national framework for 2015 - 2020***, published by the National Palliative and End of Life Partnership, describes the six ambitions that 27 partnership members, with a deep commitment to improving end of life care, would like to be achieved. You can read it at www.endoflifecareambitions.org.uk/
- ***Gold Standards Framework*** – an established training programme and accreditation scheme for front line staff caring for people in the last years of life. You can find information and search for accredited care homes at www.goldstandardsframework.org.uk/patients-amp-carers
- ***'Thinking about end of life'*** information guide and ***Let's talk about death and dying*** available from Age UK Advice or to download at www.ageuk.org.uk.

12 Complementary therapies

These include therapies such as acupuncture, chiropractic, osteopathy, homeopathy, and herbal medicine. They are not generally available as NHS treatment but your GP will know of circumstances when they may be. If considering these therapies on a private basis, speak to your GP before making an appointment. If you take prescription medicines, you must be sure any medicine or herbal remedy a therapist recommends, is compatible with your prescription medicines.

Always check a therapist has appropriate qualifications and insurance to treat you. Osteopaths and chiropractors must register with their own regulatory bodies – General Osteopathic Council and General Chiropractic Council - in order to practise legally in the UK.

Other professions such as acupuncturists and herbal medicine practitioners have their own professional bodies but not a regulatory body. These bodies can apply to the Professional Standards Authority (PSA) to receive the PSA Quality Mark and be accepted on the PSA Accredited Register. Go to PSA website to read about accreditation, check Registers online and find a local registered practitioner.

13 Accessing your health records

A health record is a historical record of your illnesses and NHS care. It contains information about your physical and mental health, medication, vaccinations, investigations such as blood tests, hospital referrals and discharge letters. You may have paper and electronic records.

Staff based at your GP practice add to your GP record at each appointment. Hospitals you visit hold their own records about your care, as will your dental practice and opticians. This means various places hold personal and health related information about you and must keep this information confidential and secure.

You have the right under *The General Data Protection Regulations (GDPR)* and *Data Protection Act 2018* to apply for access to personal information held about you, free of charge, by making a Subject Access Request, known as a SAR. You can request electronic access or paper copies and give another person permission to access your records.

A person responsible for data management within an organisation is called a *data controller*. They can only refuse to give access to information if, in their opinion, disclosure would cause serious harm to your physical or emotional health or another party; or it relates to a third party who has not given consent for disclosure (where that third party is not a health professional who has cared for you) and after taking into account the balance between the duty of confidentiality to the third party and right of access of the applicant, the data controller concludes it is reasonable to withhold third party information.

GP records

Registering at your practice for Patient Online or downloading MyGP App onto your smartphone or tablet, gives you online access to parts of your electronic GP record and clinical correspondence. You can choose to nominate someone you trust to access your record.

If you are not registered for online access or want to see parts of your record not visible online, write to the practice manager with the dates of the record you want and anything else to help staff fulfil your request.

You have a **Summary Care Record** (SCR), created from your GP record, unless you choose not to have one. It contains information about your current medication, allergies and medication you react badly to. You can choose to include additional information about, for example, long term health conditions, treatment or end of life preferences or significant medical history.

Access to your SCR helps an authorised doctor or health professional treat you and respect your preferences, if you cannot communicate, and need care away from the practice, particularly in an emergency. Speak to your GP if you would like to see your SCR, as you cannot view it online.

Hospital records

To access your hospital records, apply in writing to the records office of the hospital concerned. They require proof of your identity or of your right to access a record, if applying on behalf of someone else. You can ask to see, or for copies of, all records and test results that a hospital holds or records relating to a health condition or specific period of care. Many hospitals have an application form to help them provide what you want.

Time scales

GDPR requires organisations to respond to your request within 28 days, counting from the day after they received it.

13.1 Access to medical records of a deceased person

Access to Health Records Act 1990 covers records of a deceased person. To access a record under this Act, you must:

- be a personal representative (executor or administrator of an estate), or
- have a claim resulting from the death (as a relative or another person).

Ask the deceased person's GP how to access their GP record from Primary Care Support England. GP records are generally kept 10 years after someone dies. For hospital records, contact the records office at the hospital they attended. For more information, see the NHS website: www.nhs.uk/common-health-questions/nhs-services-and-treatments/can-i-access-the-medical-records-health-records-of-someone-who-has-died/.

14 Resolving problems and making a complaint

Each GP practice, pharmacy, optician, and dental practice providing NHS services must follow the NHS complaints procedure and have a senior staff member responsible for resolving concerns and problems.

Try to raise concerns at the time with the member of staff, their manager or person responsible for complaints handling. You can resolve some problems informally this way. If it does not, or you want to make a formal complaint, ask for a copy of their complaints procedure. This should tell you what to do.

If you feel uncomfortable making a complaint to the staff or organisation providing the service, raise it with organisation that commissions the service. NHS England is the commissioner of the services listed above.

Every area of England has a free **NHS independent complaints advocacy service** commissioned by the local authority. Contact them if you are thinking of making, or want to make, a complaint about NHS care or services. Your local Healthwatch has details of the local advocacy service and may be interested to hear about your problem, although a local Healthwatch cannot investigate NHS complaints.

Advocacy staff do not suggest a course of action but:

- help you think through exactly what you want to complain about and what you want to achieve by making the complaint
- help you write letters and prepare for meetings
- arrange for an advocate to support you at meetings if you want one.

You may also want to discuss your problem with the Patients Association.

Hospital PALS

If your complaint is about services or care in hospital, there will be a hospital Patient Advice Liaison Service, known as PALS. They can try to help you informally or explain how to make a formal complaint. Hospitals must follow the NHS complaints system.

Each hospital Trust operates a PALS service. PALS staff can tell you about Trust services and are keen to hear from patients who wish to make complimentary comments or have concerns about their care.

Early intervention by PALS staff can help resolve problems before they become major issues. They can give details of the NHS complaints process, local NHS independent complaints advocacy service and put you in contact with the hospital complaints manager.

For more information, see factsheet 66, *Resolving problems and making complaints about the NHS* and factsheet 5, *Dental Care: NHS and private treatment*.

15 Health and social care organisations

The following organisations were introduced by the *Health and Social Care Act 2012*. The Act applies in England only.

NHS England (also known as NHS Commissioning Board)

NHS England works to the Department of Health and Social Care mandate and oversees delivery of NHS services. It is nationally accountable for achievements of NHS organisations and for continued improvement in the quality of treatment and care.

Commissioning role of NHS England

Through its **four Regions**, NHS England is responsible for commissioning (buying):

- local GP services (in some cases co-commissioned with a CCG), dental services, opticians and pharmacy services
- all healthcare for prisoners and the armed forces
- specialised services for a range of conditions including rare conditions.

Clinical Commissioning Groups (CCGs)

Every GP practice must be a member of a CCG, which is made up of GPs from local practices. CCGs have representatives from other health professionals on their Board. There were 135 CCGs on 1 April 2020.

CCGs buy local services for their local population such as NHS 111, out-of-hours and emergency care, community services, hospital care, NHS continuing healthcare, mental health and learning disability services.

When commissioning, they must take account of the NHS Constitution, their local health and wellbeing strategy and take advice from bodies including their clinical networks and senates. Some CCGs have fully delegated responsibility for commissioning general practice, others have joint responsibility with NHS England.

Health and Wellbeing Board (HWB)

Each local authority (county and unitary authority) has a HWB. It plays a key role in the purchase of local services, by bringing together leaders of the local health and social care system (CCGs, local councillors, Director of Adult Social Care, Director of Public Health and local Healthwatch) to work in partnership and agree how to improve the health and wellbeing of their local population.

HWBs can invite representatives from voluntary and community organisations to be members. Based on the profile of its local population, the HWB prepares a **joint strategic needs assessment (JSNA)** and a **joint health and wellbeing strategy (JHWS)**.

Local CCG's and NHS England Regional Teams use these documents to inform their commissioning plans. The HWB scrutinises their plans to ensure they reflect JHWS needs, support joint working by health and social care services to the benefit of patients and lead to continuous improvement in the quality of care.

Public Health England (PHE)

PHE is an executive agency of the Department of Health and Social Care. It provides national leadership and expert services to support public health in England. It develops plans to protect the population from infectious diseases such as a flu pandemic, or from a terrorist attack. It is responsible for reducing health inequalities, by enabling and supporting individuals and communities to improve their own health.

It buys and delivers programmes to promote health and wellbeing and works with NHS, local government, and other agencies to address factors that affect our health, such as housing, transport and leisure services.

Public Health – local authority

Each local authority (LA) has a Director of Public Health and is responsible for local public health improvement and putting PHE plans into action at a local level such as the Cold Weather Plan and Heatwave Plan. Directors of Public Health are statutory members of HWBs.

LAs must arrange services such as NHS health checks and implement national plans to protect the nation's health, for example against pandemic flu. The NHS, working closely with LA's, retains responsibility for public health services such as national screening programmes.

Healthwatch England

Healthwatch England is the national consumer champion created to gather and represent views of health and social care service users, members of the public and local Healthwatch. It aims to influence policy and service delivery through advising NHS England, local authorities, CQC and Secretary of State for Health.

Local Healthwatch

There are 152 local Healthwatch bodies commissioned and funded by their county council or unitary authority. They gather views and experiences of users of health and social care services and publish reports on their investigations of local services.

As HWB members, they help make sure views of patients and carers are taken seriously and are an integral part of local commissioning. They can provide information, advice and support on local health and care services, and may provide the local NHS independent complaints advocacy service to support people to complain about NHS services.

Useful organisations

Action on Hearing Loss

<https://www.actiononhearingloss.org.uk/>

Telephone 0808 808 0123

Charity tackling hearing loss and providing information about specialist equipment and services for people who are deaf and hard of hearing.

Bowel screening programme

Telephone 0800 707 6060 (free call)

Call if you are over 70 and would like to request a bowel screening kit.

Care Opinion

www.careopinion.org.uk/

Telephone 0800 122 31 35

Enables the public to give feedback on their experience of NHS or social care services and the organisation to respond.

Carers UK

www.carersuk.org

Telephone 0808 808 7777 (Monday and Tuesday 10am – 4pm)

Provides information, advice and support to carers, has local support groups, and campaigns on carers' issues.

Care Quality Commission (CQC)

Our publications are available in large print and audio formats

Next update September 2021

The evidence sources used to create this factsheet are available on request. Contact resources@ageuk.org.uk

This factsheet has been prepared by Age UK and contains general advice only, which we hope will be of use to you. Nothing in this factsheet should be construed as the giving of specific advice and it should not be relied on as a basis for any decision or action. Neither Age UK nor any of its subsidiary companies or charities accepts any liability arising from its use. We aim to ensure that the information is as up to date and accurate as possible, but please be warned that certain areas are subject to change from time to time. Please note that the inclusion of named agencies, websites, companies, products, services or publications in this factsheet does not constitute a recommendation or endorsement by Age UK or any of its subsidiary companies or charities.

Every effort has been made to ensure that the information contained in this factsheet is correct. However, things do change, so it is always a good idea to seek expert advice on your personal situation.

Age UK is a charitable company limited by guarantee and registered in England and Wales (registered charity number 1128267 and registered company number 6825798). The registered address is Tavis House, 1–6 Tavistock Square, London WC1H 9NA. Age UK and its subsidiary companies and charities form the Age UK Group, dedicated to improving later life.
